

## The 'Push.To.Fit' System

Contains Gripflex™ technology that holds inserts tightly in place.

Edge aluminium extrusion with 2 Gripflex™ slots and one standard slot.

Image-N3 can be used to produce lightboxes or curved graphic holders for flat or curved fascias, the curved versions being ideal for back lighting.

Continuous fascia fronts of over 50 metres can be produced using this system.

Image-N3 can be used to produce lightboxes in a wide range of sizes and front panel insert configurations for permanent or easy change uses.

Free standing single or double sided graphic or lightbox displays can be produced with Image-N3.

For standard size units please see our separate price list or visit [www.tagisystems.co.uk](http://www.tagisystems.co.uk)

Units can be used with solid graphics or card, paper or plastic. Backlit illuminated units can be lit with fluorescent tubes or LED's.

Should you require a specialised unit, Tagi's design team can produce a custom design to meet your specific needs.

Image-N3 is available in standard anodised finish but can, if required, be painted to your requirements.
