

The 'Push.To.Fit' System

▼ Contains Gripflex™ technology that holds inserts tightly in place.

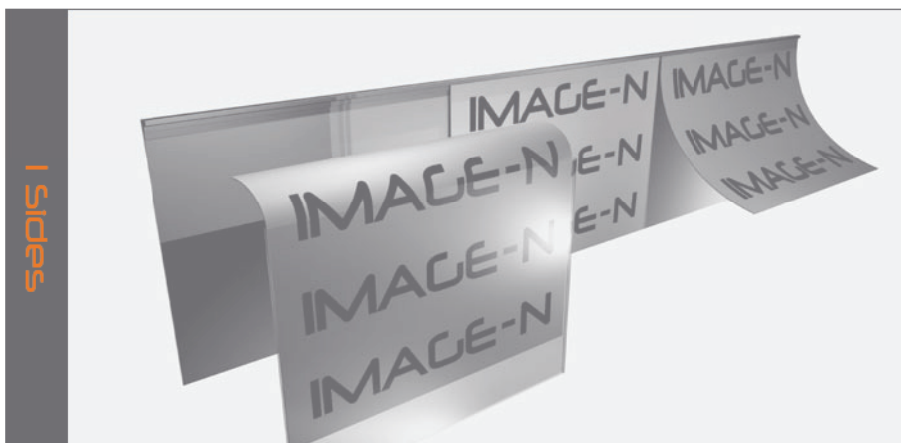

Simply
'Push.To.Fit'
It couldn't be easier

Edge aluminium extrusion with one Gripflex™ slot.

The clear front panel can be permanently fixed down one side to make changing the graphics even easier.

Image-N8 is an extremely cost effective solution to hold your graphics.

With Image-N8, your fascia card or solid panel graphics can easily be pushed up to locate in the slot. Alternatively paper graphics can be slid into a clear plastic holder and this can be easily located into our Gripflex™ slots.

Please refer to the standard price list for standard size units or visit www.tagisystems.co.uk

Image-N8 is an edge section which produces various formats of holders for display graphics from professional poster holders with mounts. The extrusion can be used on 1 and 2 slides of the panel subject to the desired application.

If you prefer to have no clear front sheet then a clear continuous strip or individual scallop sections can be used to hold your paper graphic in place.
